SERVAL - An integration project

Institutions of the UNIL-Campus (UNIL, CHUV/BiUM and the University Library BCU) are online since a long time and many research results are also already available online, but scattered through diverse applications and servers. SERVAL aims at an optimization of the ingest, conservation, preservation and output of the research and resources of the UNIL-Campus institutions.

SERVAL user categories:

- repository managers
- end users as searchers/readers
- end users as content providers
- partner institutions as searches/readers
- partner institutions as content providers
- content aggregators
- meta-users

SERVAL objectives:

- Creation of a server for deposit and archiving of documents with content provided by end users and institutions
- Creation of tools and interfaces sustaining the deposit of documents by end users, institutions and administrators
- Creation of tools and interfaces sustaining presentation and delivery of metadata and documents for repository managers, end users, institutions, aggregators and meta-users.
- Creation of workflows for the ingest of all scientific publications of UNIL (especially e-theses and preprint and postprint articles)
- Creation of a SERVAL administration net
- Creation of a Preservation and Conservation (PAC) concept
- Creation of a copyright and technical advice service for authors
- Creation of a communication concept
